

IS EVOLUTION SCIENCE OR RELIGION?

RELIGION	A cause, principle, or system of beliefs held to with ardor and faith.	
	EVOLUTION <i>The shaded part of this column taken from David Rives—davidrives.com</i>	CREATION
BELIEF	<p>There was a non-guided Big Bang over 14 billion years ago.</p> <p>This event caused the formation of the stars and planets.</p> <p>Humans evolved over millions of years by a chance mixture of all the right elements</p>	<p>God created the Heaven and the Earth in six 24-hour days.</p>
FAITH	<p>Isn't evolution a scientific fact? No. Good empirical science is observable and repeatable.</p> <p>No one observed a big bang 14 million years ago and no one has been able to duplicate it in testing through a lab.</p> <p>There are no observable report of stars forming, this would take millions of years to observe and document.</p> <p>No one has ever been able to reproduce life in a lab under the most favorable conditions despite millions of tests.</p>	<p>Faith in what God says in the Bible who was there when these things took place.</p>
HELD TO WITH ARDOR (PASSION)		
GOD	Time is the God of Evolution	The God of the Bible is the Creator of the Universe
CONCLUSION	“Evolution is irrational faith in impotent chance.” MacArthur	“Creation is rational faith in Almighty God” MacArthur
